The Value of IIS

Immunization Information Systems (IIS) offer unmatched functionality through immunization record consolidation and management. Each of the following seven key features work together to keep our communities healthy.

1 Provides Consolidated Records

Comprehensive records containing immunizations administered at a previous provider office, hospital, pharmacy or school clinic give healthcare providers the full story, preventing patients from receiving too many or too few vaccines.

2 Manages Vaccine Inventory

Vaccine ordering, tracking, and administration are all managed in one tool.

3 Minimizes Waste

Ensures every vaccine is accounted for and prevents the administration of unnecessary doses of vaccines.

4 Forecasts Immunizations

Helpful alerts notify providers to assist with clinical decisions and management of the complex immunization schedule.

5 Reminds Patients of Due Dates

Automated reminders promote on-time vaccinations.

Your appointment is coming up!

6 Spotlights Areas of Need

Population-level vaccine coverage data provides a clear view of communities at risk.

7 Expedites Response in an Outbreak

Insights into vaccination status set the stage for effective outbreak response.
